•Manufactured according to food standards

Additional Information:

Product type:	Process equipment, Screw conveyor
Industry:	Food industry
Transported material:	Bulk material, Meat
Applied steel in product:	Stainless steel
Surface treatment:	Stainless steel – acid pickled

Short Description

BEMA has designed this product in close cooperation with the customer. During this process we helped to deliver the rising system for the top cover. The screw flight was a challenge for us due to the large diameter and the holes placed inside the screw flight. The holes are made to ensure the ligued to flow freely in the machine.
